

Anatomy at work for you.

OUR FEMORAL AND HUMERAL PROSTHETICS ARE ANATOMICAL

ADJUSTABLE PROSTHETICS

Because of the fact that every donor is different and the need to recover tissues varies from case to case, our BMO prosthetics are fully adjustable.

Our upper extremity component can be used to replace the humerus, with or without the removal of the proximal radius/ulna, or the entire upper extremity. Because of our unique prosthetic design you will be able to fully extend, flex, and rotate the elbow and gleno-humeral joints.

Our lower extremity component is adjustable from twenty-two to forty-three inches in length. It also has the ability to add the BMO Pelvic Spanner for greater stability following large ilium or hemi-pelvic recoveries.

flexible solutions for your reconstruction needs

Historically many Tissue Banks have used either PVC pipes or wooden dowels for femoral and humeral replacement. This practice is fraught with disadvantages: the PVC is environmentally unsafe, and both are ill fitting into the recovered areas.

Now with the BMO prosthetics we have replicated a more natural angle of the femoral and humeral necks. This provides greater stability as the prosthetics are placed into the acetabulum or the glenoid fossa, respectively.

These more correct neck angles allow for a more correct reconstruction. This is both more aesthetic and stronger.

If your tissue bank recovers larger Ilium or Hemi-pelvis sections, the BMO pelvic spanner is perfect for you. With no acetabulum in place the femoral components can now be easily connected. Used in addition to the Lower Extremity Prosthetics it locks in place and provides adjustable yet secure spanning of the pelvic cavity.

SUPPORT SOLUTIONS

- VARIABLE DESIGN.
- ADJUSTABLE LENGTHS.
- MINIMAL ASSEMBLY.
- ANATOMICAL PROSTHETICS.
- CUSTOM DESIGN.
- DIRECT SHIPPING.
- ONLINE SUPPORT.
- DIRECT PHONE ACCESS.
- YEARS OF EXPERIENCE.
- ON STAFF PHYSICIAN.

CREMATORY SAFE

Unlike plastic or PVC, our BMO all-wood prosthetics are crematory safe. They produce no harmful fumes and will leave no trace components following cremation. This is a win-win solution. BMO Prosthetics are safe for the environment and user friendly for both the recovery and the funeral home staff.
